Kelsey Suyehira
Checkpoint 2
CS 597 - Enterprise Web Development
BSU Fall 2015

Oct 22, what new functionality or technical hurdle will you have complete?
- Work on collecting the needed data and storing in database
- Create interface to data for authorized users
- Other logging?

Unfortunately I was not able to make my checkpoint again. I am still behind and was not able to get caught up because of being gone for the conference. Also, grad school is still hard and I am even still working on mastering my time management skills.

I'm still hopeful that I will get caught up eventually!
